Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, 33-56, 64-77, 82-91, drawn to a short range wireless networking environment which determinates of access point content and services for short-range wireless terminals, classified in class 455, subclass 41.2.
- II. Claims 25-32, 57-63, 77-81, drawn to a network device and method of dynamic tuning a directional and omni-directional antenna of a wireless device, classified in class 455, subclass 277.1.

Inventions Group I and Group II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention a network device and method of dynamic tuning a directional and omni-directional antenna of a wireless device has separate utility such as selectively or alternately connected to the receiver by signal quality. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
